DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-17, drawn to a non-naturally occurring plant that ectopically expresses a nucleic acid molecule encoding a PAD polypeptide corresponding to SEQ ID NO:2, and to a method of increasing the resistance of a plant to biotic or abiotic stress by ectopically expressing a nucleic acid molecule encoding a PAD polypeptide, classified in class 800, subclass 278, for example.
- II. Claims 18-21, drawn to an isolated polypeptide corresponding to SEQ ID NO:2, classified in class 530, subclass 370, for example.
- III. Claims 22-28, drawn to an isolated nucleic acid molecule corresponding to SEQID NO:3 or encoding SEQ ID NO:4, classified in class 536, subclass 23.6, for example.
- IV. Claims 29-46, drawn to a non-naturally occurring plant that ectopically expresses a nucleic acid molecule encoding a BI-1 polypeptide corresponding to SEQ ID NO:4, and to a method of increasing the resistance of a plant to biotic or abiotic stress by ectopically expressing a nucleic acid molecule encoding a BI-1 polypeptide, classified in class 800, subclass 298, for example.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different

Art Unit: 1638

inventions have different modes of operation and different functions. The isolated polypeptide of Invention II is structurally and functionally distinct from the isolated nucleic acid molecule of Invention III.

Inventions I and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation and different functions. The method of Invention I requires ectopic expression of a nucleic acid molecule encoding a PAD polypeptide, which is not required to practice the method of Invention IV. The method of Invention IV requires ectopic expression of a nucleic acid molecule encoding a BI-1 polypeptide, which is not required to practice the method of Invention I.

Inventions III and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different process of using that product. The isolated nucleic acid molecule of Invention III can be used in a materially different process of using that product, such as a hybridization method.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, their recognized divergent subject matter, and the requirement for different areas of search, restriction for examination purposes as indicated is proper.

Application/Control Number: 09/955,526

Art Unit: 1638

Page 4

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Remarks

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cynthia Collins whose telephone number is (703) 605-1210. The examiner can normally be reached on Monday-Friday 8:45 AM -5:15 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Amy Nelson can be reached on (703) 306-3218. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-4242 for regular communications and (703) 308-4242 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0196.
